Taking network performance and control to another level

CommandIQ gives you easy access to a snapshot view of your home or small business network. Through the app you can view all the connected devices on your network, set up parental controls or a guest network, change the name of your WI-FI network, password and more.

CommandIQ puts you in charge!

**Connect & Control**

## CommandIQ

### What is CommandIQ?

An Android or Apple smartphone app that puts you in control of your home WI-FI network.

### What can I do with the CommandIQ app: Forgotten your WI-FI network name or password?

No problem! You can now change this information anytime you want directly from the app.

### Are you concerned with how much time your kids are spending looking at screens?

Parents or grandparents can now create healthy habits for screen time directly in the app.

### Do your kids take their devices to bed and stay up late looking at them?

Create bedtime routines so that your child's devices get disconnected from the internet at a set time and don't reconnect until the next morning.

### Tired of giving your network name and password to friends and family when they come over?

Create a guest network they can connect to without needing your actual network information. Text it directly to anyone you want to have access.

### Concerned that your neighbors might be connecting to your WI-FI network?

Get alerts when a new device is connected and see all devices connected at any time in the dashboard.

### Is there any cost for this app?

Nope! The app is completely free.

## ExperienceIQ

### What is ExperienceIQ?

A service that protects children from harmful or inappropriate content, limits screen time on devices or applications and displays online usage through our enhanced parental control app. It also enables you to prioritize types of traffic or devices on your network.

### How is ExperienceIQ going to benefit my family?

#### Are you concerned about how much time your children are spending on TikTok?

It is very easy for kids to get lost in these social applications and games. Now, you can set time limits to create healthier routines and enforce boundaries.

#### Are you worried about what your kids might accidentally see on YouTube?

YouTube has great content for your kids, but it also has lots of content you might not think is appropriate. YouTube Restrictions keeps your kids safer by blocking specific videos AND blocking comments displayed under videos.

#### Do you know how much time your kids are spending on their devices or on specific applications?

With usage data, get insight into how your children are using technology and create healthy boundaries.

#### Are you tired of battling with your family for bandwidth?

With more devices connected in our homes every day, conflicts can occur. You can now prioritize application groups (like work apps during the day and streaming apps in the evening) or devices (like your work laptop) to make sure the most important devices have dedicated bandwidth.

#### Do you work from home?

Set a priority for your work laptop to make sure you always have the bandwidth you need for videoconferences. Are you a gamer? Set a priority when you are gaming to make sure your gaming traffic is prioritized. Are you a streaming family? Give priority to all your streaming traffic so no one gets the spinning wheel of "not enough bandwidth."

## ProtectIQ

### What is ProtectIQ?

A network-level security service that protects ALL devices connected to your WI-FI. If it's connected, it's protected!

### What is ProtectIQ doing to keep my network safe?

#### Do you worry about the security of your connected devices?

Hackers continue to get more sophisticated, finding new ways to gain access and create havoc in our networks. You need a solution that protects ALL of the devices in your network.

#### When was the last time you updated the virus protection for your smart doorbell or thermostat?

Virus protection solutions (like Norton or McAfee) don't protect everything. They might protect a laptop or desktop, but there is no protection for your smart home devices. You can't install virus protection on a Nest thermostat or Ring doorbell.

#### Did you know hackers can push into your home network through unprotected connected devices?

Devices like Amazon Echo, Nest, security cameras and even our phones are constantly being used to look for and steal information, but with Intrusion Prevention Settings you can rest assured that ProtectIQ is constantly monitoring the traffic in your network to block intrusions and threats.
